

Forest Hill Post-Visit Work for Grebe Pond (3-4)

Now that you have visited and explored Forest Hill Nature Area, it is time to look back at the results of your pond dipping experience! Use this sheet and any extra paper you may need to complete your post-visit work.

After looking at your class' data, choose one animal specimen to look at in closer detail. Using the graph below, create line graph representing the trend over time of your selected animal. You will need to look at other schools' data from their visits to Forest Hill Nature Area to be able to graph your animal.

Amount of _____ found over time in Grebe Pond

1. What specific things do you notice about your graph? How is it changing? _____

2. Why do you think it has gone up, down, or remained relatively the same at different points throughout the year? _____

3. Based on your graph, explain the trend that you observe happening with your animal and what kind of conclusions can you come to about your animal?
